| Division | Program  | April 1 Status* | September 1 Status* | October 1 Status* |
|----------|--|-----------------|---------------------|-------------------|
|          | Continuous Quality Improvement                         |                 |                     |                   |
|          | Vaccine Preventable Diseases (Vaccine Clinics Program) | Cease           | Reduce              | Reduce            |
|          | Control of Infectious Diseases and Outbreak Management | Reduce          | Reduce              | Reduce            |

**\*Note:**

1. The three time periods selected (April, September, October) capture periods of greatest change to Public Health Services demonstrating the dynamic and rapid changes to service delivery where many programs were ceased in April. Then, there was a slight increase over the summer captured in the September update and further reductions starting in October to meet the increased operational needs of the COVID-19 emergency response.
2. The status in this Table is captured at the program level resulting in several programs presented at a “reduced” level where only one function of the program is continued. For example, the Epidemiology and Research program within the Healthy Living Division is shown as “reduced” while operating at a very minimal level looking at opioid surveillance only (one function).
