Please Support Carmine Perrellis in challenging lockdowns in York - we cannot survive with endless lockdowns

Multiple <u>well conducted studies</u> challenge the benefit of lockdowns <u>including these 30</u> and this this recent paper from <u>Stanford University</u> Furthermore, even the World Health Organization opposes the "zero" cases the Strategic Choices Group seeks has declared <u>eradication strategies are "moonshot" and we should focus on getting our</u> <u>countries back to full strength.</u>

This is particularly concerning as an ever growing number of esteemed <u>Canadian</u> and <u>international</u> voices state opposition to lockdowns, including 50,000 healthcare professionals who signed the <u>Great Barrington Declaration</u>.

After 9 months, we know SARS-CoV-2 infection fatality rate is declining. It behaves like a textbook respiratory virus in its vectors of transmission and its conferring immunity. The vast majority of covid deaths occur in the frail elderly and, outside of LTC, the risk of dying from Covid is less than 0.2%. Covid will never result in the hundreds of thousands of deaths in Canada first predicted by disgraced modeller <u>Neil Ferguson</u>. The task force has also known since June that the <u>PCR</u> test, the sole driver of skyrocketing "cases", is grossly unreliable and likely provides false positives as high as 90% and just now has the WHO made effort to adjust this fatal flaw and has <u>changed course to</u> improve covid numbers just as a vaccine, national mask mandate and hard lockdowns are started. Doug Ford blames the public for viral shed , despite the fact that community spread from retail, spas, gyms was found to be about 0.1% respectively. He also ignores stellar evidence from meta analysis and a study of 10 million to show asymptomatic transmission is insignificant to virus spread.

Sincerely Penny Houston Toronto
