

York Region's Data Levels as of February 7, 2021

Data Levels	York Region Status	Provincial Framework Thresholds*				
		Green - Prevent	Yellow - Protect	Orange - Restrict	Red - Control	Grey - Lockdown
~Average weekly incidence per 100,000	80	< 10 per 100,000	10 to 24.9 per 100,000	25 to 39.9 per 100,000	≥ 40 per 100,000	Increasing weekly incidence and/or test positivity; overall, for all age groups, and/or among those aged 70/+
~~**% positivity	4.56	< 0.5	0.5 to 1.2	1.3 to 2.4	≥ 2.5	
~~~***Rt	0.78	< 1	1	1 to 1.1	≥ 1.2	Not applicable
****Institutional outbreaks	41	Outbreak trends or observations	Repeated outbreaks in multiple sectors or settings and/or increasing number of large outbreaks	Repeated outbreaks in multiple sectors or settings and/or increasing number of large outbreaks	Repeated outbreaks in multiple sectors or settings and/or increasing number of large outbreaks	Increasing number of outbreaks among vulnerable populations, such as among residents of LTC and congregate care settings
****Workplace outbreaks	15					
****School outbreaks	2					
****Childcare centre outbreaks	10					
~New non-ICU hospital admissions	18	Hospital and ICU capacity is adequate	Hospital and ICU capacity is adequate	Hospital and ICU capacity is adequate or occupancy increasing	Hospital and ICU capacity at risk of being overwhelmed	Hospital and ICU capacity at risk of being overwhelmed
~New ICU hospital admissions	2					

### Data Notes:

- *Data thresholds corresponding to each level of the Provincial framework. Generally, regions with data levels exceeding the thresholds of each level, would enter that level. However, decisions about entering a level requires an overall risk assessment by government which considers the local context and that all thresholds within a level may not be met at the same time.
- ~For the week of February 1, 2021 to February 7, 2021
- ~~For the week of January 31, 2021 to February 6, 2021
- ~~~ For January 27th Based on Estimated date of Infection.
- **% positivity is the proportion of total tests conducted that were tested as positive (the number of positive tests among all tests completed). This helps us to understand the transmission within our community
- **Rt is the average number of subsequent infections resulting from one confirmed case. This helps us to understand the transmission within the population. This measure is based the estimated date of infection for all cases. The measure presents data with a 11-day lag as some estimated cases which have been infected may not yet be reported.
- ***Total active outbreaks as of February 7, 2021
