Subject: Highway 413

I was very surprised to hear that someone could want to build this highway. Considering all lives that are present in this area, precious and rare environment, that took millions of years to be what it's today.

Not any money, shortcut or any reason one tries to use to justify this.

It's an environmental crime, that could have not just the losses of rare species but a rare environment that must be preserved.

The citizens of the area, even the most indifferent, feel the same way, even though not manifesting their feelings.

The plan of for this construction, must be scrapped. There are other ways to resolve the need of a road, even if needs to means a few minutes more to a trip, it must be planned without touching such a delicate bioma.

Thanks.
