

April 20, 2021

I am appalled by the way that the response to the Covid virus is being handled. We are testing more and more people with the PCR test which produces false positives. As a result, fear is being propagated to the number of cases which is highly inaccurate. The government is pushing a vaccination which is only in test mode and has proven to be harmful instead of prescribing positive health measures like Vit. D, C, zinc, quercetin and Ivermectin if needed. Instead a harmful vaccination is being advertised falsely. Why are we locking down a society which is causing ill effects on everyone, destroying our society and affecting the mental balance of so many people particularly the teenagers. This is all wrong. When will someone see the truth and stop following harmful measures.

Dear Christine Elliott, MPP,

Re: Covid 19 pandemic (C19)

I represent no institution, corporation, or organization of any kind. I represent myself as a citizen of Canada and as member of the global community.

Many people in the world are truly concerned about the future of humanity - and rightly so.. Many different but related narratives have emerged about the Covid 19 epidemic, including if it even has a 'purpose'. Some of these people are labeled as 'conspiracy theorists' who are looked down upon by the media, politicians, and others.

However, would it not be the **height of irony** to some day learn that these narratives had a ring of truth to them, and were affecting us in both negative ways! Very much like the story of the **'Boy Who Cried Wolf!'** The boy gets eaten in the end when no one comes to the boy's assistance.

Let us be vigilant and **look around**. If there is a wolf then take action! One soon sees they made a mistake and then awakens to what is true – to do good in the world. One **observes carefully**; then **interprets correctly**, and then takes **practical action**.

Let us then be **cautious and alert**. Not pre-judge but be open to all viewpoints. And if proof should evade the inquiring mind, then to proceed according to one's own natural, God-given intuitive nature.

Most importantly, one avoids identifying with negative aspects of the story. A 'problem' is simply a 'fact of life', to recognize and 'grow over'. One becomes stronger and more true to themselves and others as 'the truth' emerges. There is a saying that goes 'there is what you hear, and then there is the truth'. Some under-currents of C19 to consider include.

- Is C19 an act of wild nature, or is C19 man-altered somehow and if so by whom? Why? ^{1,2}
- Is the PCR test wildly inaccurate as some claim. The originator of the test has stated it was not made for this testing and is inaccurate. Are death rates purposely exaggerated? Who would benefit from inflating numbers of false positives and numbers of deaths? Why? ^{1,3}
- Not all governments, politicians and the medical community unanimously promote a vaccine for C19. Why not recognize the super-intelligence of the human body's immune system to ward off disease and promote building of a healthy immune system? ^{4,5, 6,7}
- What other compounding issues are there in making so many people sick, such as 5G networks, a contaminated food supply (overall biotoxicity), and chronically compromised human immune systems? Why aren't such underlying factors being studied and addressed? Why is the 5G network forced on to people without their knowing? Do we really need faster internet? Who really benefits from the 5G network anyway? Why? ^{6,8,9,10,18}
- What are the possible outcomes of a prolonged epidemic with continuous experimental vaccination – financial, social and individual mental and physical? ^{10,11,12,13,14}

Additional narratives go deeper into both the negative and positive sides of C19:

- Is there indeed covert collaboration among selected global players to benefit from a pandemic, and to isolate and immunize people with an experimental vaccine? What could their agenda be? How is a virus a perfect tool to divert people's attention away from such a covert plan? ^{10,12,13,16}
- How advanced are the technologies of (for example) bio-marking and nano-bot-lipid manufacturing for use in vaccines to upload personal data onto AI clouds? And possibly to download data into humans? Who could benefit from such technology, for what purpose? ^{10,13, 15}
- Does C19 represent a desirable natural genetic update for humans? ^{6, 11}
- What is our recent and late history that underlie and influence present circumstances? ^{13,16}
- Is C19 a gateway, a sort of painful birthing of present society into its next stage of development. A letting go of the old ways and an opening into a more conscientious, awake and meaningful relationship with nature and all humanity? As some say, a further fulfillment of the ineffable God-given destiny of human as a free being, in harmony with itself and all nature. ^{6, 12,17}
- How can one best participate in a positive future; the emergent human society? ^{6, 12,14,17}
- Other narratives not mentioned here, or yet to surface. Legal perspective. ¹⁹

It has been said that “the price of freedom is eternal vigilance”.²⁰ Further it is said ‘the indolent have their rights become a prey to the active’²¹ Given the extent, scale and gravity of the present threat before us and what could possibly be at stake if we **do not** act, at worst being the loss of human freedoms, it seems utterly unconscionable to **not proceed** with such inquiries, even if just out of **pure precaution**.

Surely such inquiries, whether individual or group, are warranted out of being **duly diligent** and exercising **duty of care for ourselves and future generations**, and then to the extent necessary stem any further harm before it occurs or as it continues to occur.

Moreover, adopting a positive view point and looking to the best possible outcomes of the C19 epidemic, we can see ‘problems’ as ‘facts of life’, and as a spring board into a more positive future for humankind. Each person is charged with ‘looking within’ to express the new emergent human.

Einstein once said: ‘if I have an hour to solve a problem, I spend 55 minutes on the problem and five minutes on the solution’. (This is to know the problem as much as possible so that the solution is best fit to that particular problem). Now is our time to spend some of those 55 minutes!

One must remain positive and feel hopeful. Challenges make one strong. Let us act out of courage, clarity and wisdom at this time. We have the choice. We hold the key to a positive future.

I sincerely hope that you will consider some of this and look at the supported reference material below.

Best regards,
Madeline Rageas
