

Written Deputation for York Region Council Meeting on April 22nd, 2021

After more than a year of lockdowns, mask mandates and a sole focus on Covid, it's time for Ontario to consider a balanced, focused approach to manage and live with the virus. The idea of a **balanced focused approach has been called for since last fall, when The Great Barrington Declaration laid out how a bigger picture, more holistic approach would be more successful for society as a whole.** You can find more about the declaration and the eminent experts who penned it:

<https://gbdeclaration.org/focused-protection/>

Places like Florida who have adopted their ideas, have done as well as, or better, than the places that have adhered to strict lockdown and mask mandates at the exclusion of all else. The data on this is easy to find and has left 'experts' who call for lockdowns and masks unsure how the results are the same whether there are restrictions, or no restrictions.

The Ontario government has used a (marketing) campaign of fear to polarize and turn people into frightened beings. Of course, fear is one potent way to lower immunity and inevitably lead to health issues. Mask mandates have become common, but study, after study has shown that masks have no impact on the spread of a virus. Some have used the analogy that trying to stop a virus with a mask, is like trying to stop a mosquito with a chainlink fence!

Here's one latest study from **Stanford University that shows masks are ineffective in blocking transmission of Covid-19 and can actually cause health deterioration to those who wear them:** <https://www.thegatewaypundit.com/2021/04/stanford-study-results-facemasks-ineffective-block-transmission-covid-19-actually-can-cause-health-deterioration-premature-death/>

Recently **8 of Ontario's eminent Scientists and Drs. called on Doug Ford and the Science Table to engage in a scientific debate on the Covid measures,** which they do not believe are, or will, work. It is pasted at the bottom of this document.

I see the misery and suffering around me. My daughter who works, or did work, in the hospitality industry, has only worked 3 weeks out of the last year! Does anyone on council believe people can exist on CERB? People need the opportunity to work. The suffering being done to children is unconscionable! The damage may be irreversible at this point unless we collectively stand up and take a different approach. Ontario is the only province whose children are not in school! We need to open schools as outlined in this letter from 100 top Ontario doctors: <https://torontosun.com/news/national/open-schools-and-keep-them-open-say-over-100-canadian-doctors-in-open-letter-to-politicians>

We need to open society and let the healthy live their lives while we focus on the most vulnerable. The elderly, those with pre-existing conditions known to exacerbate Covid (obesity, diabetes et. al). We have never locked down healthy people before so why are the draconian restrictions now and why the border closures? There is no evidence of outdoor transmission or transmission from asymptomatic people as it turns out.

Here's another recent interview with 3 prominent Ontario doctors who are calling on the government to open up, explaining why lockdowns are now a waste of time:
<https://torontosun.com/news/local-news/levy-three-prominent-docs-call-lockdowns-a-waste-of-time>

Our MOH Karim Kurij has been voice for the people and I urge council to consult with the many other health experts who are calling for a new approach. The virus is now endemic and we will have to learn to live with it. Lockdowns and masks are not the way. There is a better way and we the people, are counting on you to proactively work to find a balanced approach so society can once again open and York Region can have the chance to thrive.

Thank you,

Beverley Golden

Ontario Premier Doug Ford Open Scientific Debate Challenge

Today we are making a formal request of the Ontario Premier, Doug Ford, and his pandemic response team, including the Chief Medical Officer of Health, Dr. David Williams, to join a multidisciplinary team in an open academic discussion, to be held publically, about the events surrounding Ontario's pandemic response over the last year and into the future.

This request for an open debate is similar to the one requested of the Premier of Alberta, Jason Kenney, and his Covid-19 Task Force on March 29, 2021. We believe the Canadian public across all provinces deserves to hear an open debate of all the facts so they can stay informed about the various points of view expressed by highly qualified Canadian scientists. These are experts in the fields of clinical medicine, biology, immunology, virology, epidemiology, and infectious diseases.

- Dr. H. C. Tenenbaum (Professor of Laboratory Medicine and Pathobiology, Faculty of Medicine, University of Toronto),
- Dr. B. A. Mallard (Professor of Immunogenetics, Department of Pathobiology, University of Guelph,
- Dr. B. W. Bridle (Associate Professor of Viral Immunology, Department of Pathobiology, University of Guelph),
- Dr. M Palmer (Associate Professor of Biochemistry, University of Waterloo),
- Dr. P.E. Alexander (Assistant Professor of Health Research Methodology, Evidence-Based-Medicine, Department of Health Research, McMaster University),
- Dr. D. DeCunha (Clinical and Chief Psychologist, Psychology Works, Toronto),
- Dr. P. Oldfield (PhD, Independent Scientific/Regulatory Consultant, Fellow of the Royal Society of Chemistry),
- Dr. L. Rapson (Assistant Professor Department of Family & Community Medicine U of Toronto),
- Dr. I. Bernstein, (B.Sc., M.D., C.C.F.P., F.C.F.P., Lecturer, Department of Family and Community Medicine, University of Toronto).

We are formally asking for a public forum with the Premier and his COVID-19 response team, in order to provide Ontarians with a transparent discussion of the complete data to date and the various strategies used over the year, today and in the future in relation to the Provincial response to the SARS CoV-2 pandemic. The event moderator(s) is to be agreed. All biographies will be made available upon request.

This event is being organized in direct response to ongoing societal lockdown and closure restrictions (including school closures), the sub-optimal vaccine roll-out, lack of treatment options, the handling of the virus in long-term care homes, hospitals, as well as with other vulnerable demographic groups, and the impact these have had on the province and the overall health and wellbeing of all Ontarians.

The topics we want to cover include, but are not limited to:

1. What are the actual dangers of SARS-CoV-2 by age group and steps taken to protect those in long-term care and the most vulnerable, age 60 and older with co-morbidities?
2. What is the rationale for the current vaccine roll-out and alteration to the manufacturers' recommended vaccination protocols?

Ontario Premier Doug Ford Open Scientific Debate Challenge

3. What controls are in place to limit the number of cycles used in performing PCR tests to 30 cycles to avoid undue false positives inflating the cases reported?
4. Identification and review of supporting science and corresponding data that led the province to their conclusions that the approach in use was, and is, appropriate, and not worth revision as the crisis evolved over the past 12+ months.
5. How effective are stringent population-wide restrictions (lockdowns, school closures, mask mandates, and stay at home orders) at controlling the pandemic and are they the best response given the collateral damage?
6. Why have early multidrug treatment measures, proven to be highly effective and including but not limited to ivermectin, hydroxychloroquine, doxycycline, azithromycin and other compounds used routinely in other countries, not being employed to save lives in Ontario, an action that would virtually eliminate the perceived need for lockdowns, school closures, masking among other things.
7. What are the priorities in the management of the pandemic and how can we shift the response from fear to confidence?

For over a year the Government of Ontario has used a blanket non-targeted and population-wide approach using measures that now appear to be, at best, arbitrary and worse capricious. These have led to unnecessary death of our seniors and collateral damage to our society's mental health, deaths of despair, drug overdoses (intentional or not), alcoholism, suicidal ideation and worse.

The education of our children has been hurt beyond comprehension. Similarly, knowing that the school environment is often the 1st place where evidence for child abuse or certain illnesses are initially recognized the impact on the health of our children has been very damaging. The incidence of presentation to emergency departments of parents with injured children caused by child abuse has increased dramatically! And of course, the impact on our children's education and development has been horrible.

Ontarians with severe illnesses, small businesses, and our economy have suffered immeasurable harms. In the interest of the 14.7 million people living in this Province, we want to provide all of them with a transparent discussion of the data, facts, and alternatives so we can all make an informed, collective decisions on how best to move forward with the interests of every demographic in mind.

PUBLIC FORUM DETAILS:

Where: Online event with details to be determine upon acceptance of the Ontario Government and the Chief Medical Officer of Health.

When: Within a week to two given the urgent nature of the situation in Ontario. We request that that a date be agreed upon between April 26 and May 7, 2021.
